1. PeoplePulse - Workforce Attrition and Productivity Analytics

Domain: Data Analytics Slug: peoplepulse-workforce-attrition-and-productivity-analytics-data-analytics Created: 4/12/2026

Summary

Create an HR analytics solution to track attrition, absenteeism, hiring effectiveness, and productivity trends by team.

Full Content

Project Overview

Case Study: PeoplePulse HR and business leaders need data-driven workforce planning but often rely on static monthly spreadsheets. PeoplePulse provides a dynamic people analytics command center.

As a Data Analytics Intern, you will model employee lifecycle data and generate planning insights for HR and management.

Key Objectives & Technical Architecture

Phase 1: HR Data Foundation

- Integrate employee master, attendance, performance, and hiring data.
- Build dimensions for function, location, grade, and tenure.
- Define base KPIs: headcount, attrition, absenteeism, hiring lead time.

Phase 2: Attrition and Risk Analytics

- Identify high attrition cohorts by function and tenure.
- Correlate leave trends, manager changes, and exits.
- Build attrition early-warning indicators.

Phase 3: Productivity and Hiring Insights

- Track productivity metrics by role family.
- Measure hiring source quality and time-to-fill.
- Analyze probation and early-exit outcomes.

Phase 4: Workforce Planning Dashboard

- Quarterly headcount forecast model.
- Critical role risk dashboard.

- Department-level talent health scorecard.

Prerequisites

- SQL and HR metrics
- BI tools
- Optional predictive modeling basics

Deliverables

1. Workforce analytics data model.
2. Attrition and productivity dashboards.
3. HR planning recommendation deck.

Project Timeline & Deadlines

- Week 1: Data integration and KPI baseline.
- Week 2: Attrition diagnostics and segmentation.
- Week 3: Productivity and hiring analytics.
- Week 4: Forecasting and final reporting.

2. SalesSight 360 - Multi-Channel Revenue Analytics Platform

Domain: Data Analytics Slug: salessight-360-multi-channel-revenue-analytics-platform-data-analytics Created: 4/12/2026

Summary

Build an end-to-end sales analytics solution that tracks revenue, conversion rates, rep productivity, and forecast accuracy across channels.

Full Content

Project Overview

Case Study: SalesSight 360 Most businesses have CRM, billing, and marketing data in separate systems. Leadership gets reports late and decisions are reactive. SalesSight 360 creates a unified analytics layer for near real-time sales intelligence.

As a Data Analytics Intern, you will design the data model, KPI logic, and dashboard experience for sales leaders and operations teams.

Key Objectives & Technical Architecture

Phase 1: Data Foundation

- Ingest data from CRM, order system, and payment records.
- Create cleaned dimensions for region, team, rep, product, and channel.
- Define core KPIs: revenue, pipeline value, win rate, average deal size.

Phase 2: Funnel and Conversion Analytics

- Track stage-wise conversion from lead to closed-won.
- Identify drop-off points by segment and source.
- Build cohort analysis for monthly lead batches.

Phase 3: Forecasting and Variance

- Implement weighted pipeline forecast logic.
- Compare forecast vs actual with variance drivers.
- Build alerting for likely target misses.

Phase 4: Executive Dashboards

- Drill-down dashboards for region, team, and rep.
- Weekly and monthly board-ready summary views.

- Export features for PDF/CSV reporting.

Prerequisites

- SQL and data modeling
- Excel/Google Sheets
- Power BI/Tableau/Looker Studio
- Optional Python (Pandas)

Deliverables

1. ETL scripts and cleaned analytics dataset.
2. KPI dictionary and metric validation document.
3. Interactive sales analytics dashboard.

Project Timeline & Deadlines

- Week 1: Data ingestion and schema design.
- Week 2: Funnel and conversion models.
- Week 3: Forecast and variance analytics.
- Week 4: Dashboard polish and handoff.
